

Pakistan - Islamabad

Global Youth Tobacco Survey (GYTS)

FACT SHEET

The Pakistan – Islamabad GYTS includes data on prevalence of cigarette and other tobacco use as well as information on five determinants of tobacco use: access/availability and price, environmental tobacco smoke exposure (ETS), cessation, media and advertising, and school curriculum. These determinants are components Pakistan could include in a comprehensive tobacco control program. The Pakistan - Islamabad GYTS was a school-based survey of students in grades 8-10, conducted in 2003.

A two-stage cluster sample design was used to produce representative data for Islamabad, Pakistan. At the first stage, schools were selected with probability proportional to enrollment size. At the second stage, classes were randomly selected and all students in selected classes were eligible to participate. The school response rate was 96.8%, the student response rate was 85.1%, and the overall response rate was 82.3%. A total of 1680 students participated in the Pakistan - Islamabad GYTS.

Prevalence

- 9.3% of students had ever smoked cigarettes (Boy = 13.9%, Girl = 4.1%)
